## Agenda

Tru64 UNIX® roadmaps

- Version 5.1B
- Version 5.1B-1
- Version 5.1B-2

HP Tru64 UNIX® Technical Overview

2

## HP reaffirms commitment to its Tru64 UNIX® on AlphaServer systems installed base

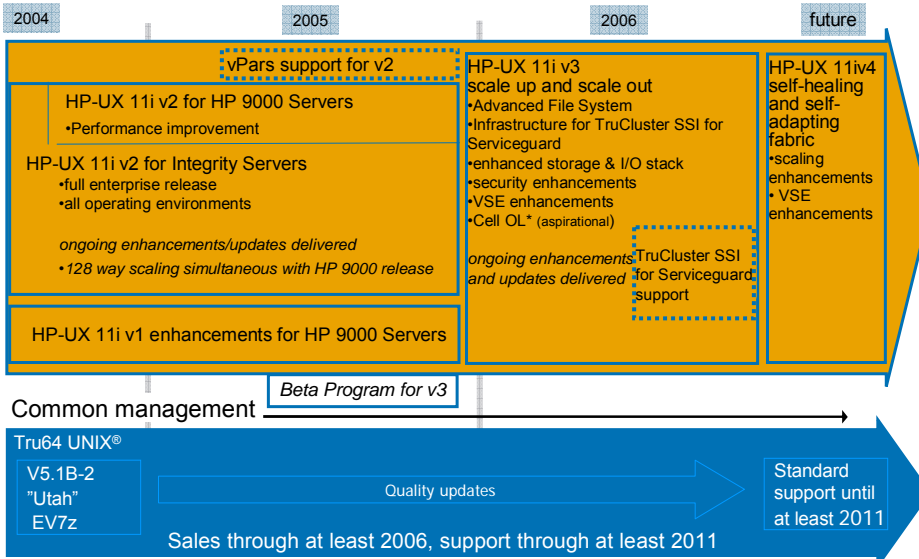

- ✓ Continued enhancements to Tru64 UNIX® ecosystem – roadmap is unchanged.
  - EV7z upgrade for AlphaServer systems
  - Tru64 UNIX V5.1B-2 (“Utah”) on schedule
  - ESS Alliances group continues work with ISV partners
- ✓ Opportunities for transition enhanced through
  - Alpha RetainTrust program, including transition tools, financial assistance, etc. for transitions to HP-UX 11i or other HP platforms.
  - ISV momentum for HP Integrity servers acceleration provided through new roadmap
  - Earlier vPars availability on Integrity systems
- ✓ HP-UX 11i v3 functionality remains unchanged
  - Functionality roll-out better matches Tru64 UNIX customers’ implementation plans, with AdvFS technology available first
  - TruCluster SSI for Serviceguard is planned as an update
  - HP-UX 11i v3 Beta Program will be introduced for early adopters

HP Tru64 UNIX® Technical Overview 3

## HP-UX 11i and Tru64 UNIX® roadmap

The roadmap diagram shows a timeline from 2004 to the future. Key milestones include:

- 2004:** HP-UX 11i v1 enhancements for HP 9000 Servers.
- 2005:** HP-UX 11i v2 for HP 9000 Servers (Performance improvement); HP-UX 11i v2 for Integrity Servers (full enterprise release, all operating environments); ongoing enhancements/updates delivered (128 way scaling simultaneous with HP 9000 release); vPars support for v2; Beta Program for v3.
- 2006:** HP-UX 11i v3 (scale up and scale out, Advanced File System, Infrastructure for TruCluster SSI for Serviceguard, enhanced storage & I/O stack, security enhancements, VSE enhancements, Cell OL\* aspirational); ongoing enhancements and updates delivered; TruCluster SSI for Serviceguard support.
- future:** HP-UX 11i v4 (self-healing and self-adapting fabric, scaling enhancements, VSE enhancements).

At the bottom, a blue arrow represents the Tru64 UNIX® roadmap, showing V5.1B-2 "Utah" and EV7z, with quality updates and standard support until at least 2011. Sales through at least 2006, support through at least 2011.

HP Tru64 UNIX® Technical Overview 4

## HP AlphaServer evolution

Sales at least until 2006, with support at least until 2011

Year	2003	2004	2005
Server Models	GS80, GS160, GS320 GS1280 8p, 16p GS1280 32p GS1280 64p	CPU: EV7 1.15GHz Type: new-box OS: HP Tru64 UNIX, HP OpenVMS	HP Integrity Superdome HP Integrity rx8620
Server Models	ES45 ES47 ES80	CPU: EV7 1GHz Type: new-box OS: Tru64 UNIX, OpenVMS CPU: EV7z Type: in-box OS: HP Tru64 UNIX, OpenVMS	HP Integrity rx7620
Server Models	DS10, DS10L, DS20E, DS20L, DS25 DS15	CPU: EV68 1GHz Type: new-box OS: Tru64 UNIX, OpenVMS HP Integrity rx2600 HP Integrity rx1600	CPU: Itanium next gen Type: new box OS: OpenVMS, Linux, HP-UX 11i v2, .NET CPU: Itanium next gen Type: in-box OS: OpenVMS, HP-UX 11i, Linux, Windows

Subject to change without notice HP Tru64 UNIX® Technical Overview 5

# HP Tru64 UNIX® V5.1B “Wildcat”

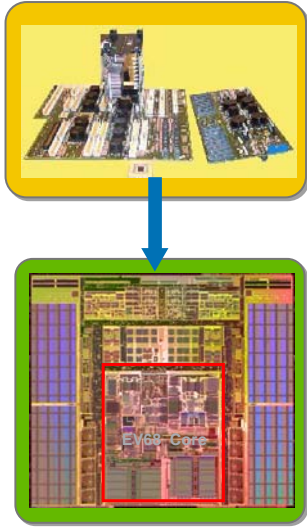

HP Tru64 UNIX® Technical Overview

7

  
invent

## Version 5.1B EV7 Infrastructure

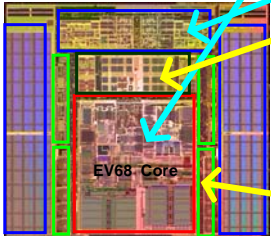

- EV7 platform support 2-8, 16, 32 and 64 CPUs
- Indictment
  - CPU
  - PCI
- On Chip Controllers
  - memory and I/O
- Processor Scheduler
  - mesh scheduler
  - NUMA gravity

HP Tru64 UNIX® Technical Overview

8

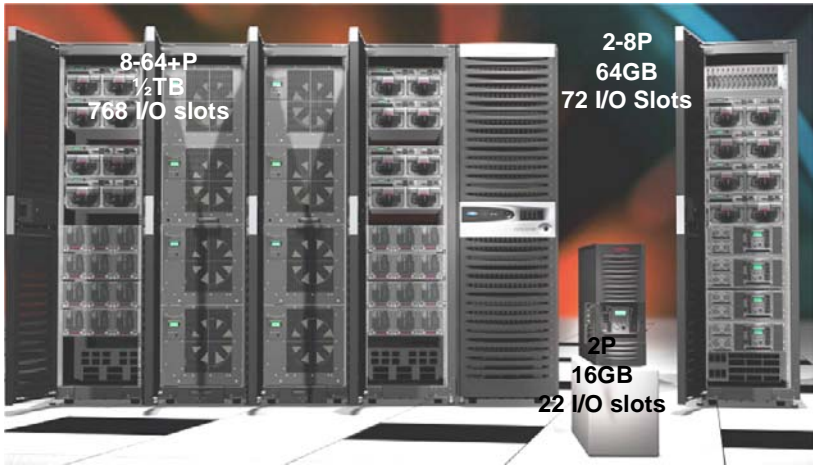

## EV7 Design Innovation

- EV6 core processor
  - No changes to compiler or code scheduling
  - Completely transparent to software
- Integrated memory & I/O controllers
  - benefit to HPTC applications
  - Transparent to applications
- NEW CPU interconnects

HP Tru64 UNIX® Technical Overview 9

## Absolutely Marvelous!!!!

8-64+P 1/2TB 768 I/O slots	2-8P 64GB 72 I/O Slots	2P 16GB 22 I/O slots
----------------------------------	------------------------------	----------------------------

HP Tru64 UNIX® Technical Overview 10

## EV7 HW support

- Memory Troller
  - For proactive memory failure detection
  - Default value: 4 percent per hour (range can be 1-100)
    - Will Troll all memory in 24hours
  - To discover current Troll rate
    - `# /sbin/sysconfig -q vm vm_troll_percent`
  - Can override default with line in `/etc/sysconfigtab` file
    - `vm_troll_percent=percent_rate`
  - To enable, disable or change at any time
    - `# /sbin/sysconfig -r vm vm_troll_percent=percent_rate`
  - Accelerated Trolling: 101 percent
    - Will run Troller in accelerated mode and then disable
    - Good for running at off peak (can do 128 GB in 5 mins)

HP Tru64 UNIX® Technical Overview

11

## Big Memory Pages

- Special Requirement from HPTC
  - Basic functionality in 5.1B
  - Application tunable button in 5.1B-1
  - Support for system page tables 5.1B-2
- Will greatly improve performance of:
  - Memory Intensive Applications (i.e. DB)
  - Finite Element Applications (i.e. Modeling)

HP Tru64 UNIX® Technical Overview

12

Virtual Memory (VM)

Virtual Memory (VM) 

## Big Memory Pages Continued

- To enable: (Note System comes with this disabled)
  - **vm\_bigpg\_enable=1**
  - **Then reboot system**
- To disable:
  - **vm\_bigpg\_enable=0**
  - **Then reboot system**
- Support for pages of 64KB, 512KB and 4096KB.
- Reduces TLB misses thus improves its throughput.
- Kernel chooses optimized page size at runtime in 5.1B
- Application Tunable big pages in 5.1B-1
- System Page tables in a big page in 5.1B-2

HP Tru64 UNIX® Technical Overview 16

## Security Enhancements

- Bundled SSH with 5.1B, 5.1B-1 and 5.1B-2
  - Based on application from SSH Communications Security.
  - Replaces traditional less secure commands
  - Command 'rsh' equivalent ssh2
  - Command 'rlogin' or telnet equivalent ssh2
  - Command 'rcp' or 'ftp' equivalent 'scp2' or 'sftp'
  - root may set `EnforceSecureRutils=Yes` in `/etc/ssh2/ssh2_config`
  - User may set `EnforceSecureRutils=Yes` in `$HOME/.ssh2/ssh2_config`
- Will allow System Admins to force the use of SSH instead of rsh.

HP Tru64 UNIX® Technical Overview 17

## Security Enhancements continued

- Pseudo Random Number Generator.
  - System captures timing of HW interrupts
  - Stores and shuffles timings (like a deck of cards)
  - Produces a random number when requested from deck.
- `/dev/random`
  - Greater possibility of randomness
  - will stall until it has sufficient entropy to fulfill the request
- `/dev/urandom`
  - Will always give you a number even it has only a few stored
  - theoretically may not be as random as `/dev/random`

HP Tru64 UNIX® Technical Overview 18

## Security Buffer Overflow (5.1B PK2)

- **Unprecedented Memory Attack Protection (V.5.1B PK2)**

- Heap Buffer Overflow Protects Any Area of Program Memory from Executing Malicious Code
- Even Apps Vulnerable to Heap Buffer Overflows Become Impenetrable
- Optional Activation

## File Systems and Storage

LSM Vol

Plex = 

- What is LSM?
  - Logical Storage Manager Software
  - Volume mirroring SW
  - SW RAID
- LSM Fast Plex Re-attach

## LSM support for - Fast Plex Reattach

- Reduces re-silvering impact of LSM mirrors
  - Both time spent and I/O load during re-silvering
- Create a 'FPA' capable volume using top-down (TD) or bottom-up (BU) approach
  - `volassist` (TD)
  - `volplex, volsd, volmake, volume` (BU)
- Fast Plex Attach with `volassist`
  - `volassist addfpa volume [attrs]`
    - .. `make volume <len> layout=mirror,fpa [attrs]`
    - .. `make volume <len> loglen=nn [attrs]`
    - .. `make volume <len> nfpalog=nn [attrs]`
    - .. **`snapfast primary_volume secondary_volume`**
    - .. **`snapback secondary_volume primary_volume`**

21

## LSM – Fast Plex Reattach

- **`volassist snapfast primary_vol sec_vol`**
  - Adds FPA log plex (primary) to the volume
  - Add FPA sub-disk (secondary) to the Active plex
  - Detach Active plex (the migrant plex)
  - Use migrant plex to create secondary (aka snapshot of) volume
- **`volassist snapback sec_vol primary_vol`**
  - Detach migrant plex from secondary volume
  - Merge FPA for secondary volume with FPA of primary volume
  - Reattach migrant plex to primary volume and resilver
  - Disable FPA logging (`disallow FPA-detach` until resilver

22

## LSM & HW snapshots

- Currently LSM actively rejects hardware generated clones and snapshots
  - Actually, any device that has a mismatched wwid listed in the configuration header for the volume is rejected as a clone/snapshot.
- `volclonedg` will allow hardware clones/snaps to be included in their own disk-group
- **# `volclonedg -g dg1 dsk14 dsk15 dsk16`**
  - LSM creates the clone disk group and starts its volumes.
- `Clone_disk_name`: Has to be device, not partition

## Freeze/Thaw of AdvFS & CFS

- Ensuring Metadata Integrity by Freezing Domains
  - `/sbin/freezefs [-t 0|time in seconds] /mount_point`
  - metadata-consistent state until thawed
  - All of the filesets in the domain are frozen
  - All metadata is flushed to disk and is frozen
  - Operations such as read continue
- Thaw
  - By command `/sbin/thawfs /mount_point`
  - By timing out
  - by shutting down any cluster node of a frozen file system
  - In the event of a cluster node failure

## AdvFS LUN/UNIT Expansion

- LSM and hardware RAID controllers support dynamic growth of Volumes today.
  - AdvFS does not support this.
- Dynamic growth of LSM or hardware RAID volume is done independently of AdvFS, you must notify the domain when the size of a vol changes, therefore we use the mount command with the `–o extend` to achieve this:
  - If the fileset is not already mounted, enter:
    - **mount -o extend domain#fileset /mountpoint**
  - If the fileset is already mounted, enter:
    - **mount -u -o extend domain#fileset /mountpoint**

HP Tru64 UNIX® Technical Overview

25

## AdvFS vFast Utility

- vFast: Automatic Background Defragmentation
  - No administrative downtime for defragment operations
  - Negligible Impact to System Load & Performance
  - Automatic Free Space Consolidation
  - Automatic Load Balancing of I/O Across Volumes
  - Improved I/O Performance via Hot File Analysis of Frequently-Accessed Files
  - Command **/sbin/advfs/vfast**
- AdvFS Utilities License required for vFast
  - **/sbin/defragment** enabled as part of base OS license

HP Tru64 UNIX® Technical Overview

26

## Parallel HBA Probe

- New and improved storage bus scan algorithm
  - Scans all HBAs for devices *in parallel*
  - Significantly improves boot time on large configurations
- Large storage configurations took time to boot
  - One problem was serialized device scanning
- Parallel SCSI Bus Probe is **disabled** by default
  - To enable
    - `parallel_edt_scan=1`
  - To disable
    - `parallel_edt_scan=0`

HP Tru64 UNIX® Technical Overview

27

## Software Development

- Java SDK 1.3.1 with FastVM as default
- Java SDK 1.4.1
  - Available via APCD on 5.1B-1 update kit.
  - Planning 1.5.1 for future release
- DECthreads V3.20 Optimized for Marvel Support
  - Threads on a Leash Optimize Performance
  - Configurable-Length “Dog Chains” Vary Average Memory & I/O Access Times
- Mozilla LDAP C SDK instead of Netscape
  - Netscape has same APIs as LDAP C SDK
  - Available via APCD on 5.1B-1 update kit.

HP Tru64 UNIX® Technical Overview

28

## General Operating System

- New Printers Supported (ongoing effort)
  - <http://h30097.www3.hp.com/printing/printers.html>
- Printing Supported via SysMan
  - Configure and monitor print queues
  - Same functionality as is available from CDE
  - Requires X-Server on PC client
- Unicode 3.1 support
  - 44,946 extra char now supports 94,140 char
- Asian Language enhancements for Insight Manager

HP Tru64 UNIX® Technical Overview

29

## Networking

- IPv6 Production Mode
- Continued support of IPv4 Networks
- Dual Stack IPv4 and IPv6
- IPv6 Porting Tools
- IPSEC supported on IPv6
- Update POP and IMAP
- Updated via Internet Express
  - Bind 9 and Sendmail (July 2004)

HP Tru64 UNIX® Technical Overview

30

## Manageability

- OpenView Support

HP Tru64 UNIX® Technical Overview 31

## Tru64 UNIX® Interoperability

- Co-existence Within Heterogeneous Environment
- Cross platform interoperability
- Complementary Tools & Applications

HP-UX	ASU	Internet Express	Open Source Software Collection	Professional Linux Dev SW CD	Portability Tools
UNIX Interoperability & Migration assistance	Windows Interoperability for Tru64 UNIX	Open Source and commercial Internet applications for Tru64 UNIX	Open Source Applications for Tru64 UNIX	Compaq C, C++, Fortran, Ladebug, CPML, CXML, and Code Forge IDE	GNU Pro Portfolio, KDE & GNOME, Linux Binary Emulator, RPM, plus, for Tru64 UNIX
On the APCD Plus whitepapers	On the APCD included with Tru64 UNIX kit	Bundled with Tru64 Unix Alpha Systems	included in Tru64 UNIX Software Kit; Web Download	Web Orderable Download; CD also Available	included in Tru64 UNIX Software Kit; CD Available; Web Download

Tru64 UNIX® roadmaps

TruCluster 5.1B

Version 5.1B-1

Version 5.1B-2

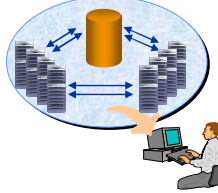

HP Tru64 UNIX® Technical Overview

33

  
invent

## TruCluster Server V5.1B – CFS Dynamic Load Balancing

- Dynamic rebalancing based on
  - User defined policy and preference / connectivity / memory consumption / failover events / analysis
- Managed by `cfsd`
  - One `cfsd` per member
  - `cfsd` startup
    - Read config file (`/etc/cfsd.conf`)
    - Select leader
    - Ready to track statistics and do the work
  - `kill -HUP <cfsd.pid>` to force re-read of config file
- Results from analysis logged in `/var/cluster/cfs/analysis.log`

HP Tru64 UNIX® Technical Overview

34

## TruCluster Server V5.1B – CFS Mount Affinity

- Allows admin specify a cluster member as initial server for a file system.
  - Provides same functionality as the Sierra Cluster's member `fstab` feature (aka `fstab_member`)
- Most useful for NFS client file systems which cannot be relocated after they've been mounted
- Command

```
# mount -o server=<hostname>
```

HP Tru64 UNIX® Technical Overview

35

## TruCluster Server V5.1B – Balancing CAA App resources

- **`/usr/sbin/caa_balance -all [-q]`**
  - Attempts to find optimal member for all apps
  - `-q` Suppress output from the command.
- **`/usr/sbin/caa_balance -s source_member [-q]`**
  - Optimal placement for apps on current member
- **`/usr/sbin/caa_balance resource_name [...] [-q]`**
  - `/usr/sbin/caa_balance testapp`

HP Tru64 UNIX® Technical Overview

36

## TruCluster Server V5.1B – Parallel Roll Support

- Possible to roll more than one member at a time
  - “No” change to roll procedure
    - Order of operations
  - Overlapping “clu\_upgrade roll” commands
    - Number of nodes rolled is limited by quorum configuration
    - Possible to roll both with and w/o adjusting quorum
      - Number of members that can may “simultaneously” depends on vote configuration
    - Key Issue: reboot of a member **cannot** result in loss of quorum
      - Clu\_upgrade will confirm that reboot will not affect quorum
- “clu\_upgrade undo” is still a serial administrative “event”

HP Tru64 UNIX® Technical Overview 37

## Agenda

Tru64 UNIX® roadmaps

Version 5.1B

**Version 5.1B-1**

Version 5.1B-2

HP Tru64 UNIX® Technical Overview 38

## What is Tru64 UNIX® V5.1B-1

- *“Version 5.1B-1 is a minor, update release of Tru64 UNIX® , consisting of V5.1B base components, which remain unchanged, and updated components for Version 5.1B-1.”  
From the Read This First for Tru64 UNIX 5.1B-1*
- *The Goal of this release was to get minor enhancements together with various Hardware support to our customer base without perturbing the ISV.*
- *We achieved this goal by doing a minor update to 5.1B without revising the base OS CD which is what the majority of ISVs have qualified against.*

HP Tru64 UNIX® Technical Overview

39

## Binary Compatibility with V5.1B

### Tru64 UNIX® V5.1B and V5.1B-1 Compatibility

- *“Version 5.1B-1 is a minor, update release of Tru64 UNIX®, consisting of V5.1B base components, which remain unchanged, and updated components for Version 5.1B-1.”*
- *“It does not require the ‘update installation’ procedure of the operating system. As a result this release preserves total binary compatibility with Tru64 UNIX 5.1B and does not require ISV application recertification or recompilation.”*

*From the binary compatibility statement for Tru64 UNIX 5.1B*

HP Tru64 UNIX® Technical Overview

40

## Contents of version V5.1B-1 part I

- Items which remain the same as V5.1B
  - Base OS CDROM is V5.1B the foundation for V5.1B-1
  - V5.1B Doc CDROM
  - V5.1B Release notes and various manuals
  - Open Source SW CDROM
  - Linux Portability Toolkit

## Contents of version V5.1B-1 part II

- Items which are new to V5.1B-1
  - Release notes for V5.1B-1
  - Drop NHD 7 into kit
  - V5.1B Patch Kit 3 CD
  - Sources CD for Open Source components
- Items being refreshed in V5.1B-1
  - APCD 1 (Associated Product CDROM 1)
  - APCD 2 (Associated Product CDROM 2)
  - Read This first letters

## HP Tru64 UNIX® V5.1B-1

- High Performing Platform for 64 CPU EV7 Systems
- The New DS15 AlphaServer
- Application tunable Big Pages.
- Enhanced Storage Manageability
  - Via support for additional SNMP trap events
- Greater file system scalability
  - Higher LSM I/O throughput
  - AdvFS panic avoidance

HP Tru64 UNIX® Technical Overview

43

## Storage & Data Manageability 5.1B-1

- Broader support of StorageWorks products
  - MSA1000 enhancements
  - EVA array controllers
  - Integration with XP storage array products
  - HP Data Protector
    - Server (media agent) providing robotic control for backup devices
    - Integrates with Oracle Recovery Manager, Informix IDS, and SAP backup & recovery tools
    - Mission critical data backup and recovery in TruCluster Server software

HP Tru64 UNIX® Technical Overview

44

# Agenda

- Tru64 UNIX® roadmaps

  - Version 5.1B-1
  - Version 5.1B-2**

HP Tru64 UNIX® Technical Overview 45

# What is Tru64 UNIX ® V5.1B-2

- *“Version 5.1B-2 is a minor, update release of Tru64 UNIX ®, consisting of V5.1B base components, which remain unchanged, and updated components for Version 5.1B-2.”  
From the Read This First for Tru64 UNIX 5.1B-2*
- *The Goal of this release was to get minor enhancements together with various Hardware support to our customer base without perturbing the ISV.*
- *We achieved this goal by doing a minor update to 5.1B without revising the base OS CD which is what the majority of ISVs have qualified against.*

HP Tru64 UNIX® Technical Overview 46

## Binary Compatibility with V5.1B

### Tru64 UNIX® V5.1B and V5.1B-2 Compatibility

- *“Version 5.1B-2 is a minor, update release of Tru64 UNIX®, consisting of V5.1B base components, which remain unchanged, and updated components for Version 5.1B-2.”*
- *“It does not require the ‘update installation’ procedure of the operating system. As a result this release preserves total binary compatibility with Tru64 UNIX 5.1B and does not require ISV application recertification or recompilation.”*

*From the binary compatibility statement for Tru64 UNIX 5.1B*

HP Tru64 UNIX® Technical Overview

47

## Contents of version V5.1B-2 part I

- Items which remain the same as V5.1B
  - Base OS CDROM is V5.1B the foundation for V5.1B-2
  - V5.1B Doc CDROM
  - V5.1B Release notes and various manuals
  - Open Source SW CDROM
  - Linux Portability Toolkit

HP Tru64 UNIX® Technical Overview

48

## Contents of version V5.1B-2 part II

- Items which are new to V5.1B-2
  - Release notes for V5.1B-2
  - Drop latest NHD7 plus PK4 into kit
  - V5.1B PK4 Patch CD-ROM (contains fixes & functionality)
  - Sources CDROM for Open Source components
  
- Items being refreshed in V5.1B-2
  - APCD 1 (Associated Product CDROM 1)
  - APCD 2 (Associated Product CDROM 2)
  - Read This first letters et al

HP Tru64 UNIX® Technical Overview 49

## Free 3<sup>rd</sup> party products bundled with 5.1B-2

- HP Data Protector
  - HP OpenView Storage Data Protector 60 Day Trial
  - For HP StorageWorks SSL1016 Tape
  
- Datadirect (Now owned by Progress Computers)
  - New versions of ODBC and JDBC drivers for Oracle 10g Support
  - Commitment to new drivers for the next 3 years
  - Extended 6 year support
  
- *EnterpriseSCHEDULE* (TBD)
  - ISE product
  - 60 day trial copy
  - Enterprise Batch Scheduler
  - Same offering with every new HP-UX server today

HP Tru64 UNIX® Technical Overview 50

## Updated Migration toolkit

- Appscan – Utility for Scoping Porting Effort to Migrate Tru64 UNIX Application to HP-UX
- Software Transition Kit – Facilitates Transition of Tru64 UNIX Apps to HP-UX (App File Scanners, Scan Wizard, Developers' Documentation)
- HP-UX Man Pages – Enables Viewing HP-UX On-Line Help Files within Tru64 UNIX

HP Tru64 UNIX® Technical Overview

51

## V5.1B PK4 Deliverables

- Major Patch Kit Quality Improvement
  - Please note the adoption of Service Pak model for PK4
  - Quicker patching of customer systems (40% approx)
  - All or nothing
  - Can uninstall to back out kit
  - Patch kit 4 contains fixes and functionality
  - Will ship as part of V5.1B-2
    - Should be available on Web within the next 6 weeks.

HP Tru64 UNIX® Technical Overview

52

## Tru64 UNIX® V5.1B-2 deliverables

- Big Pages support for Page Tables
- Improved Large SMP & NUMA System Performance via Unified Buffer Cache Scaling
- Networking Standards Updated
  - Mobile IPv6 Update (PK4) In Line With Latest RFCs
  - IPv6 Advanced API Conforms To Latest Specification (RFC 3542)

HP Tru64 UNIX® Technical Overview

53

## V5.1B-2 TruCluster deliverables part 1

- Faster Problem Diagnosis (hidden from customer)
- Significantly Faster LSM Cluster Boots
- Improved Cluster Efficiency For Bad Disk Detection
  - Ability To Differentiate Path Or Device Failure Reduces Time & Overhead From Devices Gone Bad
- Improved Troubleshooting Efficiency from Cluster Alias Information
  - Enables RT Information Retrieval From Cluster Alias Daemon
- Improved MC Performance During Peak Utilization
  - Configurable MC Input Threads

HP Tru64 UNIX® Technical Overview

54

## V5.1B-2 TruCluster deliverables part 2

- Faster App or Web Server Responsiveness via Sticky Connection Attribute For Cluster Alias
  - Client Connections To Same Cluster Node Creating *Stickiness* Between Servicing Cluster Member & Specific Client/Port
  - Saves Cost of Specialized Router
- Process Management through Clusterized Commands
  - SYSCONFIG now clusterized

HP Tru64 UNIX® Technical Overview

55

## Summary of version 5.1B-2

- EV7z support
- Same deliverables as the generic dash release model
- Additional 3<sup>rd</sup> party deliverables

HP Tru64 UNIX® Technical Overview

56

## General Information

- Update Paths
  - 5.1A → 5.1B\*
  - 4.0F → 4.0G → 5.1 → 5.1B\*
  - 4.0F → 4.0G → 5.1 → 5.1B\*

Note: 5.1B\*= 5.1B, 5.1B-1 and 5.1B-2

- Licensing
  - 5.1B → 5.1B-1 requires update license
