

## NetWorker for OpenVMS

ODS-2 & ODS-5 File Systems  
Oracle 8i, 9i, and 10i  
Oracle Rdb

a division of EMC

## Customer Imperatives Today

- Cost Effectiveness/ROI
  - Ability to Backup and Archive data in a heterogeneous environment with a single LAN-free solution
- Deliver on SLA requirements
  - OpenVMS issues
    - Not always feasible to backup across the network
      - Multiple TB's stored
      - Mission Critical Applications
      - OpenVMS Clusters are common
      - Oracle and Oracle RDB are frequently used
- Resources focused on value-added applications
- Improve access and retrieval of corporate data
- Systems and software that are aligned to changes in the business

## What Customers Want *for Data and Applications*

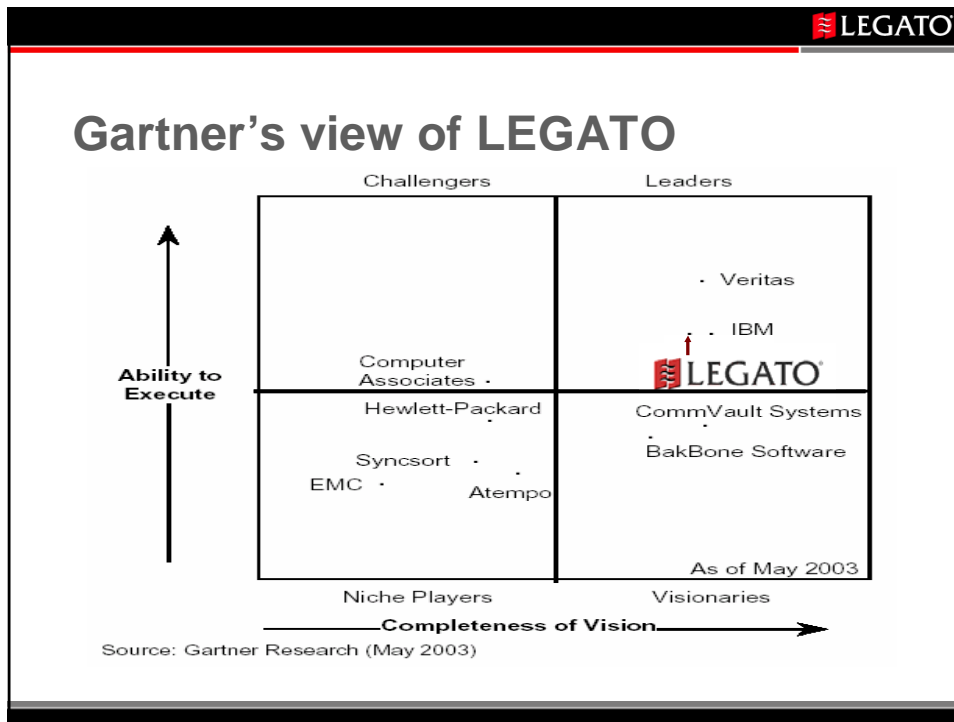

- 1 Reduce Total Cost of Ownership (TCO)
- 2 Index Reference Assets
- 3 Long-term Data Retention
- 4 Performance
- 5 Scalability
- 6 Application Integration
- 7 Ease of Management

Source: ESG, "Reference Information: The Next Wave"

## Where LEGATO is a Leader Today

- Enterprise Backup and Recovery
- Active Archiving for email, databases and file systems
- Emerging Email Compliance market
- Integrated content and storage management with over 200 Partners
- Customer Satisfaction

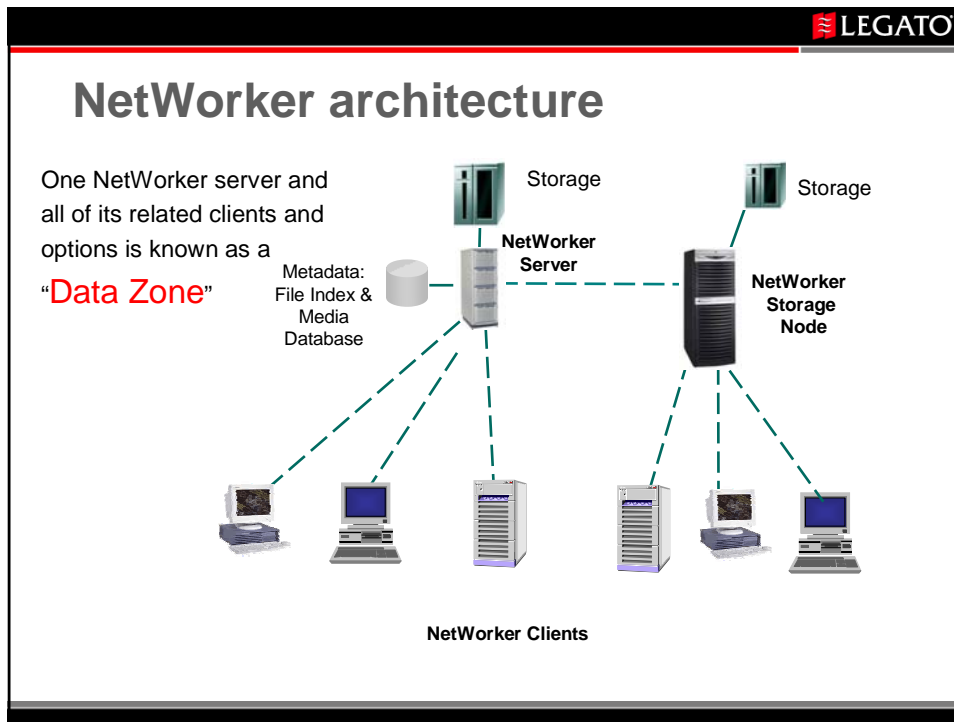

- 
- LEGATO's History with HP starts with Digital**
- Digital OEM'd NetWorker for Ultrix; later OSF/1 (Digital/Tru64 Unix) and Windows NT on Alpha
  - Digital outsourced development of OpenVMS client to Wumpusware
  - Digital Outsourcing selected NetWorker as default backup tool
  - On acquisition of Digital, Compaq changed software strategy and returned NetWorker source to LEGATO
    - Compaq continued to provide 1<sup>st</sup> & 2<sup>nd</sup> Level Technical Support
    - LEGATO NetWorker Single Server ships with Tru64 UNIX
  - Outsourcing agreement expanded to include right to resell LEGATO's full product suite
  - Consulting and integration services agreement to design and implement Legato solutions
  - HP can resell LEGATO products today

## Value Proposition

- **NetWorker for OpenVMS**
  - Reduces TCO by:
    - Including OpenVMS systems, and clusters, in heterogeneous backup solutions
    - Reducing training needs, and administration costs, by providing a cross-platform GUI and command line
    - Reduce load on valuable staff
      - Move tasks to Operations
      - Consistent policies, no matter the platform
  - Improving ROI by
    - Sharing tape devices, media, and libraries with UNIX and Windows systems
    - Delivers LAN free backup and archiving to direct, or fibre channel, attached tape or disk

## NetWorker Overview

- NetWorker Architecture
- Scalable Network Topology
- Comparison with ABS
- Cluster and “cluster” Support
- Centralised Management
- Online Application Backup and Recovery
- NetWorker Features
- NetWorker for OpenVMS
- NetWorker Oracle Module for OpenVMS

-

---	--

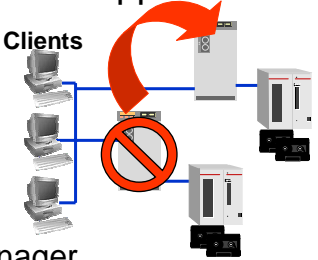

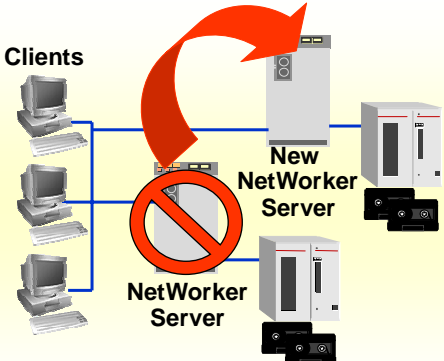

## NetWorker Differentiation – HA support

- “Clustered” Client & Storage Node Support
  - HP OpenVMS Clusters
  - HP TruCluster
  - HP MC-ServiceGuard
  - Microsoft Cluster Services
  - Legato Application Availability Manager
  - Veritas Cluster Services (Client only)
  - Sun Clusters
  - IBM HACMP

## Highly Available NetWorker Server

**Preserves NetWorker Server by:**

- NIC2NIC IP address failover, when NIC's fail
- Restarts NW services on a secondary server when the first server fails
- Between servers, transfers any in-progress Save Sets

## Centralised Management & Control

- **Single Point of Control**
  - Administer multiple servers simultaneously
  - Control all group schedules and policies
  - GUI
    - Motif:
      - OpenVMS, UNIX & Linux
    - Windows
    - Java – via NetWorker Management Console
- **Firewall Support**
  - Back up NetWorker clients through firewall
  - User specified TCP/UDP ports
  - Supports OpenVMS, Unix & Windows

## Centralised Management & Control

- **Advanced Client and Media Indexes**
  - Supports “unlimited” number of client backups & media tapes
  - ‘Write-once, Read-many’ architecture eliminates corruption completely.
  - Supports Saveset up to 4TB in size
  - Client File & Media Index can be transferred to a Server with different OS file systems
- **Browse Policy**
  - Defined per NetWorker Saveset, group of savesets or client
  - Allows for point in time recovery
  - Data is visible via User Administration interface
- **Retention Policy**
  - Defined per backup media
  - Used for grooming and recycling media
  - Data is visible via System Administration interface

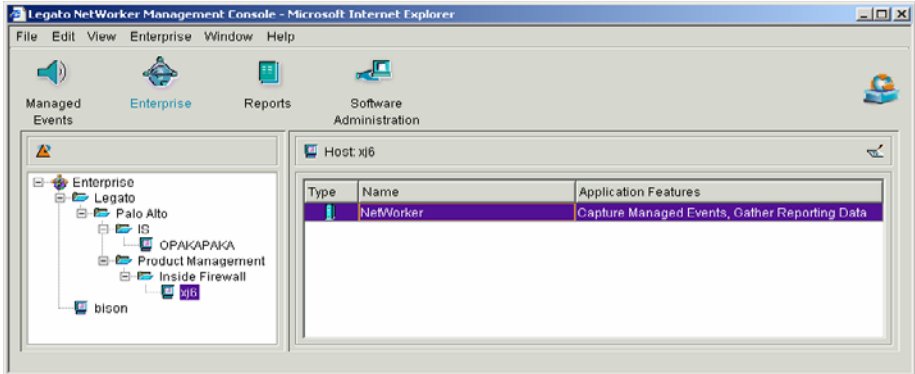

## Administration and Reporting

### NetWorker Management Console

- LEGATO's web enabled management application allows central monitoring, administration, and reporting on NetWorker.
  - Easy to install and deploy
  - Immediate Web-enabled management of NetWorker
  - Enterprise Hierarchy
  - Centralised Administration
  - Centralised Reporting
  - Centralised Event Monitoring

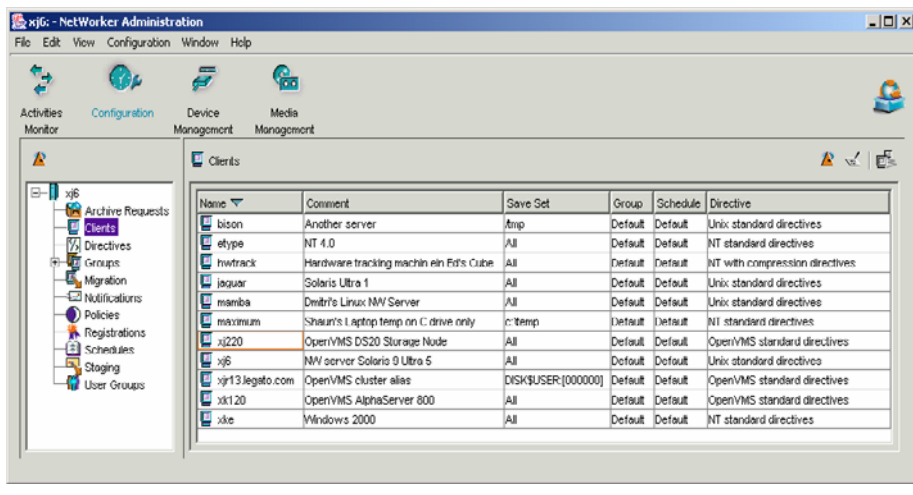

## Enterprise Hierarchy

Event Annotation

Add New Annotation:  
 Day shift...unable to repair, please check motherboard...

- 
- ## Multiple Backup Levels
- Full Backup - all files regardless if changed or not
  - Incremental - Back up files that have changed since last full backup
  - Level 1-9 - Back up files that have changed since the last lower numbered backup.
  - Directives – Backup 'all' but 'skip' /.../...
  - Consolidated - Backup all data changed since last full backup and merges with last full backup
  - Skip - Skip a backup if not needed
  - Volume & Saveset Cloning
  - Staging

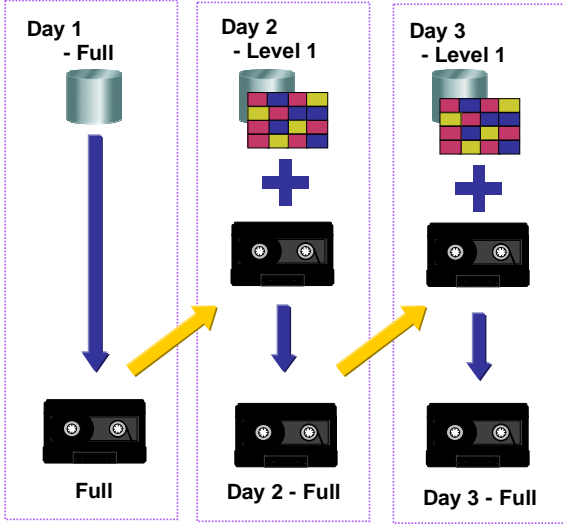

## Directives

- Examples:
  - Nobackup = /ignore=nobackup
  - nolock = /ignore=interlock
  - Record = /record
  - Skip = /exclude

## Saveset Consolidation

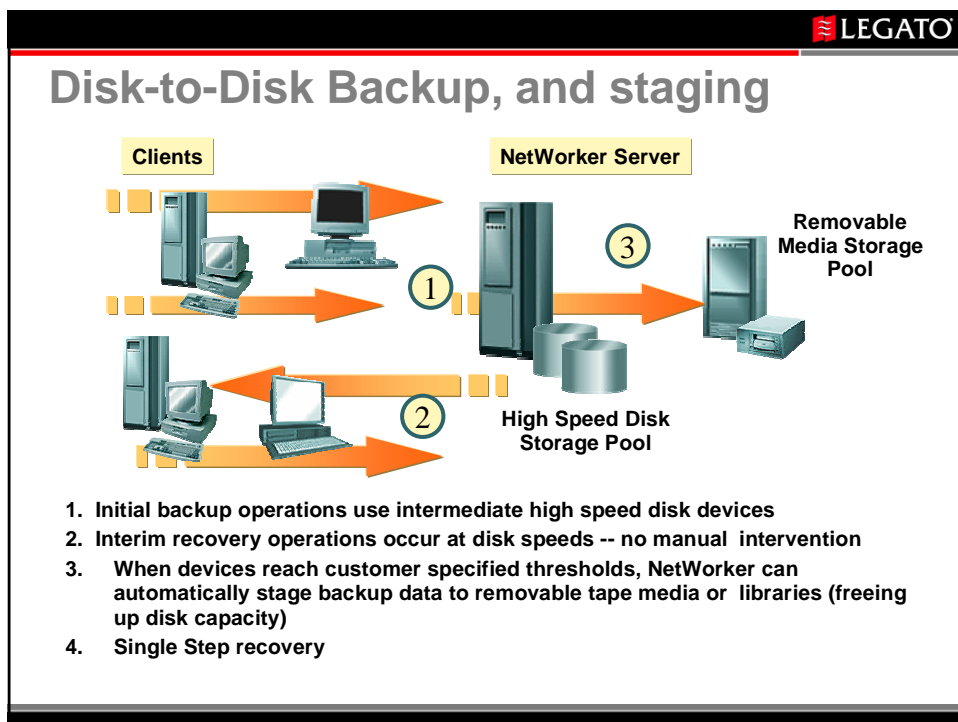

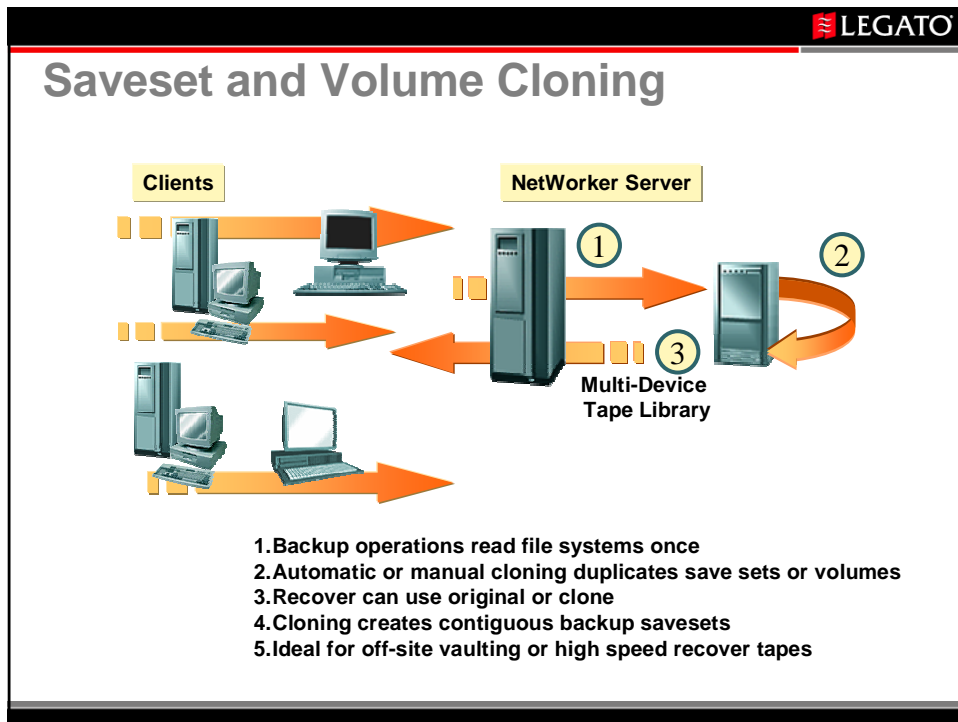

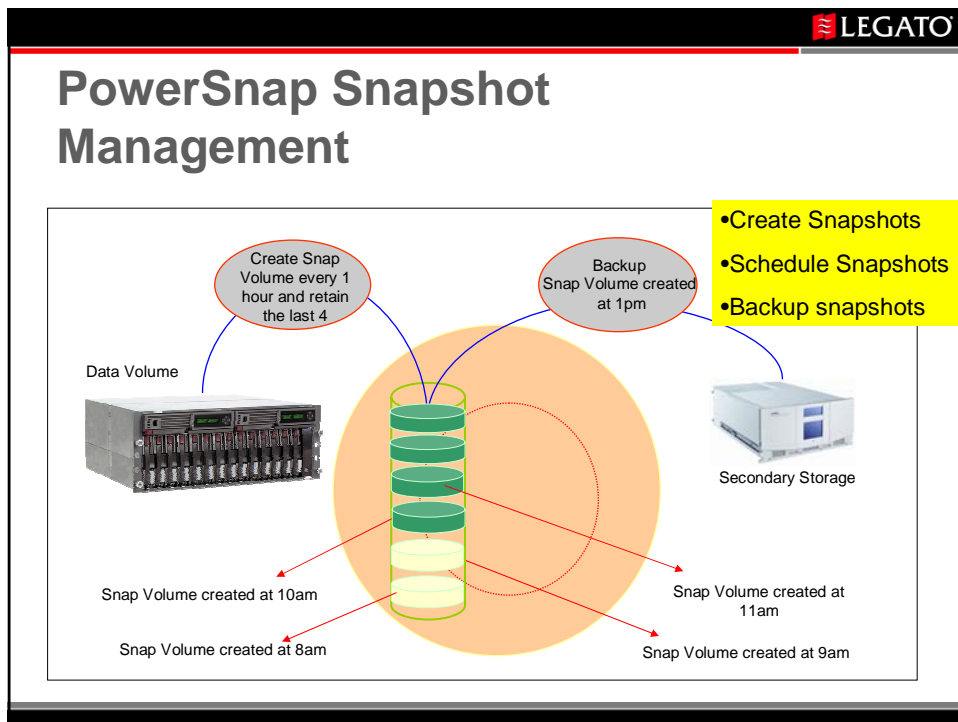

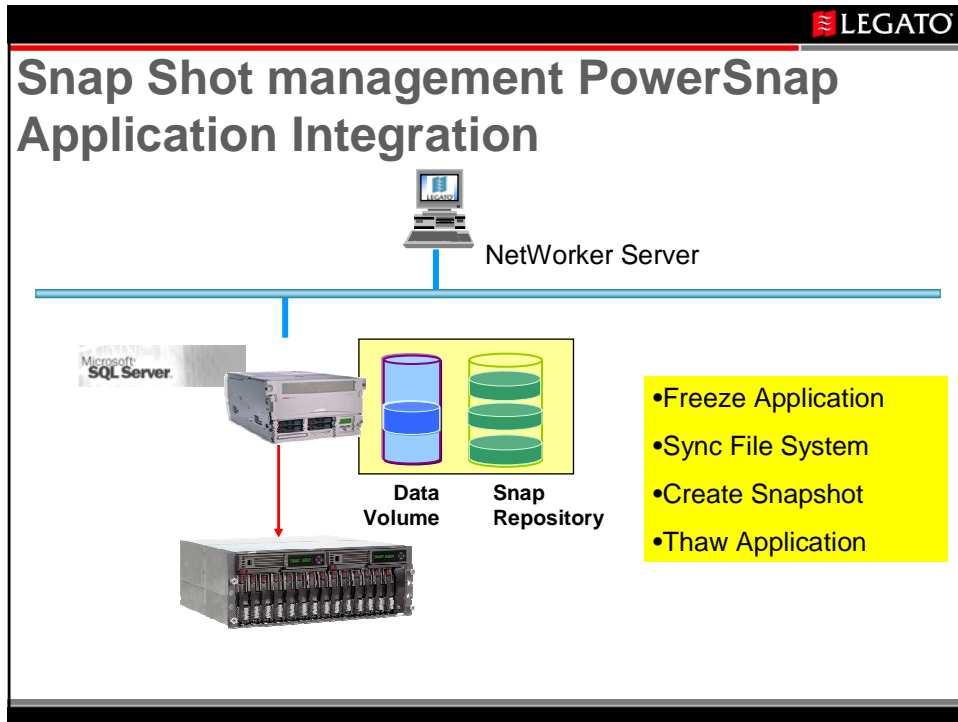

**Backups**

*Merges Level 1 backup with full back up Saveset to create a new full backup*

.....

**Single set of tapes to recover!**  
**Faster Recovery Time !**

## PowerSnap Value Proposition

- ***LEGATO seamlessly integrates instant backup and rapid restores with traditional backup operations***
  - Scheduling, browsing, retention policies, etc. of snapshots

## Key Features of NetWorker for OpenVMS

- Supports OpenVMS data being stored in heterogeneous fibre-based SAN environments, including library sharing and tape drive sharing – *an industry first!*
- Protects OpenVMS servers to locally attached tape libraries reducing network traffic and improving backup and recovery performance (storage node only)
- Allows for a centrally managed backup and recovery solution for OpenVMS systems that exist within a mixed UNIX, Windows, Netware and Linux environment
- Supports OpenVMS clients running in an OpenVMS cluster
- At least match OpenVMS Backup performance

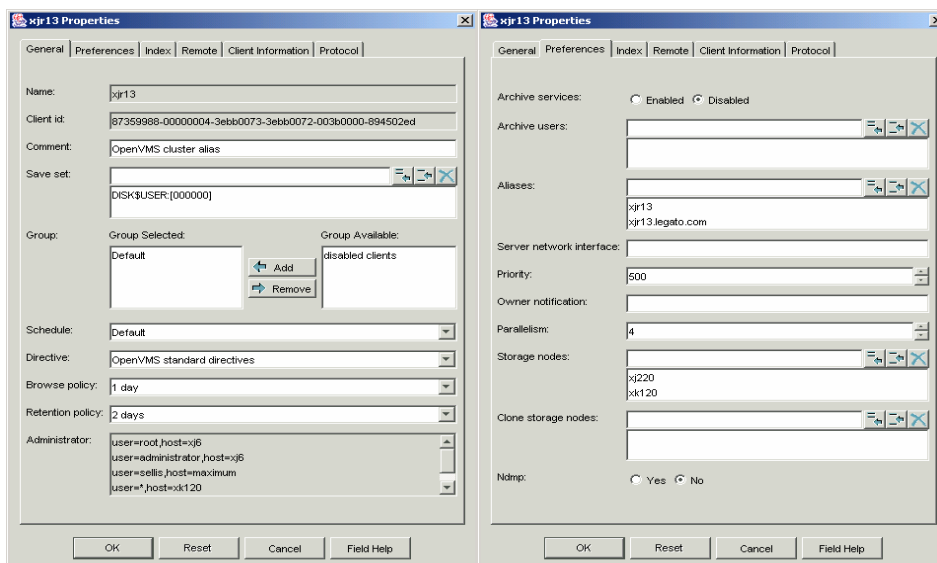

## Compatibility

- **Client**
  - ODS-2 File System, ODS-5 in Beta
  - OpenVMS clusters
  - VAX 5.5-2 and above
  - Alpha 7.0 and above
  - HP's TCP/IP Services (UCX), Multinet, TCPware
  - Archiving (OpenVMS for Alpha 7.0 and above)
  - Co-exists with OpenVMS Shelving (HSM)
- **Storage Node – Alpha V7 and above**
  - Tape devices and Libraries supported by the OpenVMS SCSI driver
  - Library Sharing
  - Dynamic Drive Sharing
    - NW V6.1 and above server and library controlled by NW 6.1 server or Storage Node.
    - Fibre Channel Requires OpenVMS V7.2-2 and above
  - Disk to Disk Backup

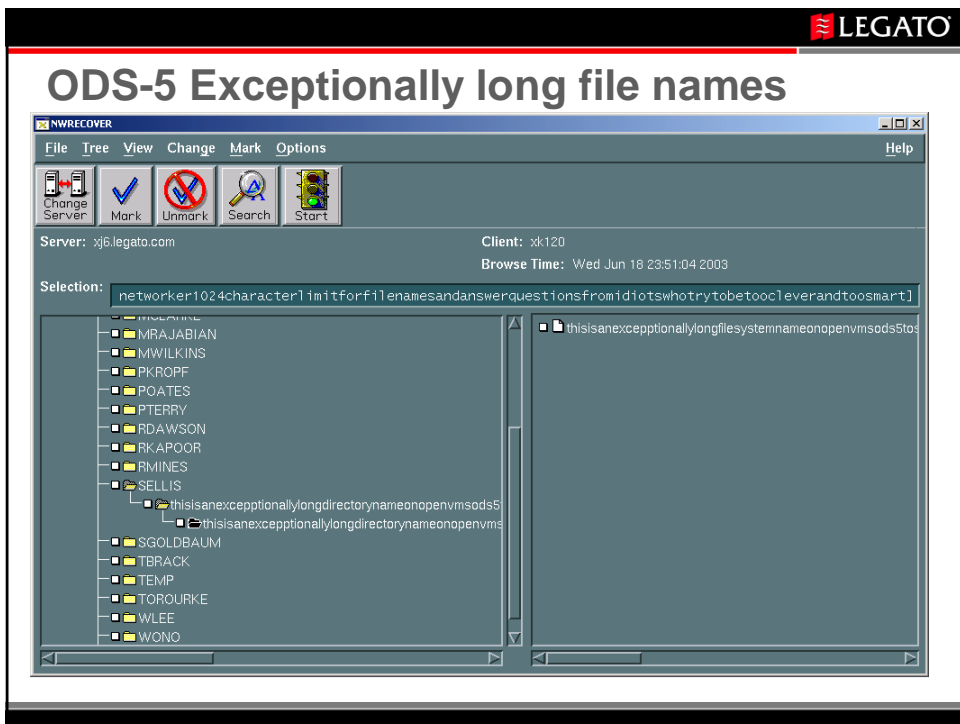

## Defining an OpenVMS Cluster Client

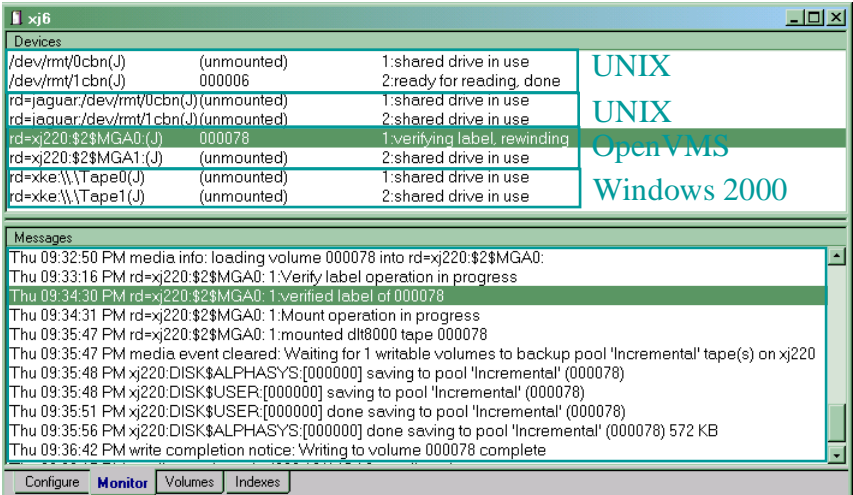

The screenshot displays the 'xjr13 Properties' dialog box with the following configuration:

- General Tab:**
  - Name: xjr13
  - Client id: 87359988-00000004-3ebb0073-3ebb0072-003b0000-894502ed
  - Comment: OpenVMS cluster alias
  - Save set: DISK\$USER:[000000]
  - Group: Group Selected: Default; Group Available: disabled clients
  - Schedule: Default
  - Directive: OpenVMS standard directives
  - Browse policy: 1 day
  - Retention policy: 2 days
  - Administrator: user=root,host=vj6; user=admin,host=vj6; user=sellis,host=maximum; user=\*,host=xl120
- Preferences Tab:**
  - Archive services:  Enabled  Disabled
  - Archive users: [Empty field]
  - Aliases: xjr13, xjr13.legato.com
  - Server network interface: [Empty field]
  - Priority: 500
  - Owner notification: [Empty field]
  - Parallelsm: 4
  - Storage nodes: vj220, xl120
  - Clone storage nodes: [Empty field]
  - Ndrp:  Yes  No

## Oracle Support on OpenVMS

- In Beta now, Release in December
- Supports SBT (RMAN) API V2.0
  - Oracle 8i, 9i and 10i
  - Rdb 7.1.2.1.0
    - Worked closely with Rdb engineering team
    - LIBRARIAN qualifier supported
      - Database backup and restore
      - Journal backup and recovery
    - requires a patch from Rdb.

## Rdb Support

- Use the /LIBRARIAN qualifier with RMU
  - Device, directory, file type are ignored
- Specify reader and writer threads in commands, like:

```
$ RMU /BACKUP /LIBRARIAN /LOG -
_ $ rdb-root-file rmu-backup-file
```

- Backup save set managed by NetWorker
- Restore is just as you would expect

```
$ RMU /RESTORE /NOCD /LIBRARIAN /LOG rmu-backup-file
```

## Multi-threaded Backup Supported

- Specify reader and writer threads in commands, like:

```
$ RMU /BACKUP /LIBRARIAN = (WRITER_THREADS = 3)/LOG -
_ $ rdb-root-file rmu-backup-file
```

- Results in three backup files (managed by NetWorker)

```
RMU-BACKUP-FILE.RBF
RMU-BACKUP-FILE02.RBF
RMU-BACKUP-FILE03.RBF
```

- On restore, if reader threads don't match writer threads use /VOLUMES

```
$ RMU /RESTORE /LIBRARIAN=(READER_THREADS = 2) -
_ $ /VOLUMES=3 rmu-backup-file
```

## Parallel Process Backups with Rdb

- Multiple processes distribute backup processing across SMP processors, cluster nodes
- Can use both parallel processes and threads

```
$ RMU /BACKUP /PARALLEL = EXECUTOR = 3 -
_ $ /LIBRARIAN = WRITER_THREADS = 3 -
_ $ /LOG -
_ $ rdb-root-file rmu-backup-file
```

- These commands write to 9 save sessions
- SQL/Services required for parallel backups

## Backup Plans Supported

- Generate a backup plan then edit, execute:

```
$ RMU /BACKUP /PARALLEL = EXECUTOR = 3
_ $ /LIBRARIAN = WRITER_THREADS = 3 -
_ $ /LIST_PLAN = parallel_backup.plan -
_ $ /NOEXECUTE /LOG -
_ $ rdb-root-file rmu-backup-file
_ $
_ $
_ $ EDIT parallel_backup.plan
_ $
_ $ RMU /BACKUP /PLAN parallel_backup.plan
```

## Restoring using Rdb

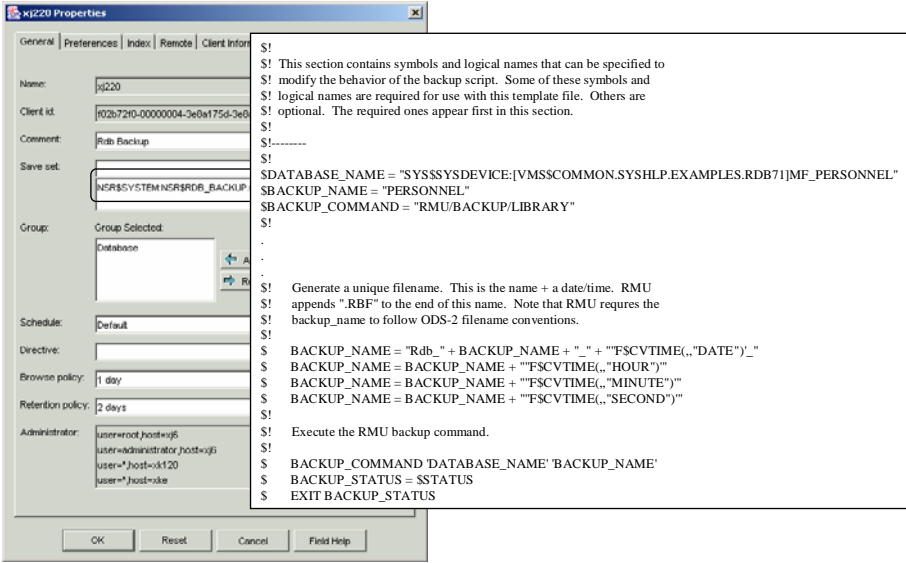

- Use the same plan file to restore the database
- Parallel restore still not supported
- Limit restore threads like this:

```

$ RMU /RESTORE
_ $ /LIBRARIAN = (READER_THREADS = 3, -
_ $ PLAN_FILE = parallel_backup.plan) -
_ $ /LOG -
_ $ rmu-backup-file
    
```

## Rdb Client in NetWorker

The screenshot shows the 'kj220 Properties' dialog box with the following fields filled in:

- Name: kj220
- Client id: f02b7210-00000004-3e8a175d-3e8a
- Comment: Rdb Backup
- Save set: NER\$SYSTEM\$NER\$RDB\_BACKUP
- Group: Database
- Schedule: Default
- Directive: (empty)
- Browse policy: 1 day
- Retention policy: 2 days
- Administrator: user=root,host=xj6; user=administrator,host=xj6; user=\*host=xj120; user=\*host=xj6

The text area on the right contains the following script template:

```

$!
$! This section contains symbols and logical names that can be specified to
$! modify the behavior of the backup script. Some of these symbols and
$! logical names are required for use with this template file. Others are
$! optional. The required ones appear first in this section.
$!-----
$!
$DATABASE_NAME = "SYSSYSDEVICE:[VMSSCOMMON.SYSHLP.EXAMPLES.RDB71]MF_PERSONNEL"
$BACKUP_NAME = "PERSONNEL"
$BACKUP_COMMAND = "RMU/BACKUP/LIBRARY"
$!
$!
$! Generate a unique filename. This is the name + a date/time. RMU
$! appends ".RBF" to the end of this name. Note that RMU requires the
$! backup_name to follow ODS-2 filename conventions.
$!
$ BACKUP_NAME = "Rdb_" + BACKUP_NAME + "_" + ""FSCVTIME(,"DATE")_"
$ BACKUP_NAME = BACKUP_NAME + ""FSCVTIME(,"HOUR")_"
$ BACKUP_NAME = BACKUP_NAME + ""FSCVTIME(,"MINUTE")_"
$ BACKUP_NAME = BACKUP_NAME + ""FSCVTIME(,"SECOND")_"
$!
$! Execute the RMU backup command.
$!
$ BACKUP_COMMAND 'DATABASE_NAME' 'BACKUP_NAME'
$ BACKUP_STATUS = SSTATUS
$ EXIT BACKUP_STATUS
    
```

## Delivering Operational Efficiency and Business Continuance...

- ONE, a leading Austrian telecom provider protects more than **54 terabytes** on NAS/SAN
  - reduced resources and personnel required for data protection
  - better able to leverage SAN environment
  - **cut Oracle backup times by 50%**  
...To Help Customers Change *Their* Rules

## Coming to a Release Near You Soon

### We need your feedback to define priorities:

- Q4 CY2003
  - In Beta from October 2003, support for:
    - ODS-5
    - RDB 7.1.2 and above
    - Oracle 8i, 9i, 10i
  - Itanium Port for OpenVMS 8.0
- CY2004
  - AlphaStor client
  - NetWorker server
- ?

## HP & LEGATO Support

- **Technical Support**
  - 1st and 2nd line support offered by HP and LEGATO (customer choice)
  - 3rd line support offered by LEGATO
- **LEGATO technical field sales support**
  - LEGATO OpenVMS “Consuls”
  - Specialists who have background in OpenVMS and will assist in answering technical questions/pre-sales support

## Legato Information & Contacts

[openvms@legato.com](mailto:openvms@legato.com)

the leader in open software solutions for Information Management™

The image shows a promotional banner for Legato. It features a red globe icon on the left, followed by the word "LEGATO" in white capital letters on a black background. Above the banner, the text "the leader in open software solutions for Information Management™" is displayed. Below the banner is a white rectangular area.
